Late Breaker: It has now been 2 years since the first case of SARS-CoV-2 infection was identified in Colorado. Overall, Colorado has fared better than most other states, ranking 10th lowest in the death rate due to COVID-19. Currently, COVID-19 cases continue to decline and test positivity has fallen to around 3%. With lifting of mask mandates, however, we have seen an increase in the number of children testing positive for influenza over the past 2-3 weeks, re-emphasizing that respiratory season is still here and it is not too late to vaccinate for influenza.
