Late Breaker: We are still seeing circulation and outbreaks of norovirus in the community; a good reminder to all of us to continue good hand hygiene and cleaning and disinfection of surfaces. In other news, the outbreak of Mpox that was receding in the United States is not over. Last week the CDC issued a health advisory highlighting a recent new cluster of 13 cases in Chicago (<https://emergency.cdc.gov/han/2023/han00490.asp>). Although there has been no documented cases in Colorado since January 2023, clinicians should continue to test for Mpox in clinically compatible patients.
