Late Breaker: 764 cases of measles have been confirmed in 23 states. This is the greatest number of cases reported in the US in a year since 1994. If you are concerned about measles in a child, please notify the CDPHE and order the appropriate testing (measles PCR from a NP specimen and a serum IgM). If you are unable to conduct testing at your facility, please notify the facility you are sending the patient to ahead of time so that they can immediately place the patient in appropriate airborne precautions upon arrival and give the patient a mask to wear into the facility to reduce risk of transmission.
