Late Breaker: Respiratory Season in here! We are now seeing high levels of RSV and influenza circulating in Colorado and the numbers continue to rise. In addition to the increase in respiratory viruses, we are also seeing a rise in the number of cases of invasive group A streptococcus (iGAS). Although relatively rare, clinical presentations of iGAS include severe pneumonia, sepsis, toxic shock, musculoskeletal infections, severe sinus disease, and necrotizing fasciitis. iGAS infections can follow or occur during a respiratory viral infection like RSV, SARS-CoV-2, or influenza. Importantly, influenza and varicella vaccination have been shown to decrease the risk of iGAS infections.
