Late Breaker: SARS-CoV-2 (the virus that causes COVID-19) continues to spread around the globe. International locations with widespread local community transmission include China, South Korea, Iran, Italy, Japan, France, Germany, and Spain. In the U.S we are seeing community transmission in parts of WA, CA, and NY. There have been 9 cases of COVID19 diagnosed in Colorado, all with a travel history to areas with local community transmission. Currently there is no evidence of local transmission in Colorado, although this may change in the near future. For updated guidance regarding CHCO’s recommended testing procedures and PPE usage for a person with suspected COVID-19, please visit: https://www.colorado.gov/pacific/cdphe/2019-novel-coronavirus
