Late Breaker: There continues to be widespread circulation of influenza A, influenza B, and RSV in our community. The CDC estimates that there has been at least 22 million illnesses, 210,000 hospitalizations and 12,000 deaths from flu already this year, including 78 pediatric deaths. To reduce the spread of infections, please remember to remind your patients to practice good hand hygiene, avoid touching eyes, nose and mouth with unwashed hands, cover coughs and sneezes, avoid close contact with people who are ill, and stay home when you are sick.
